

Meet nano.

NEW

Ti-Max nano

Contra-Angle

Small, but mighty.

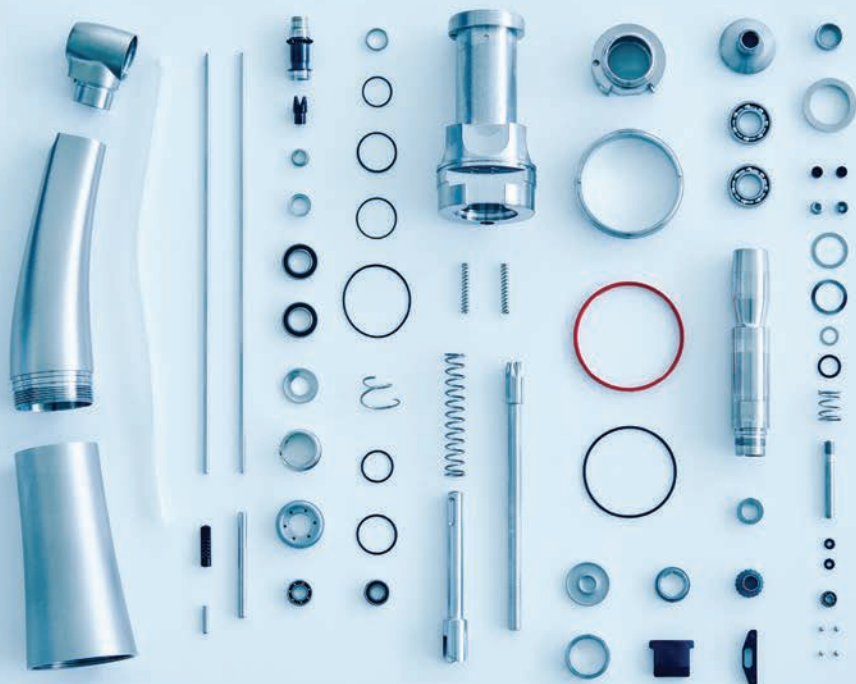

Delicate and precise, a natural extension of your hand.

10% smaller and lighter*

Manufacturer Warranty

Means peace of mind.

NSK Products are precision manufactured in Japan with 100% of NSK parts manufactured in-house. It is with this quality in mind that NSK products come with guarantees of the highest standard. Registering your NSK products today for Warranty will ensure total peace of mind. With NSK, you are supported for the life of your NSK products.

Ti-Max nano

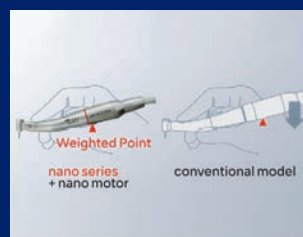

Shorter, Perfectly Balanced

Lighter and perfectly balanced, "Ti-Max nano" handpieces are designed to be a natural extension of the clinician's hand, ensuring smoother procedures. Even during procedures that require delicate and precise movements, a "nano" handpiece faithfully mirrors the user's intent. NSK continues to challenge the limits of manufacturing to pioneer next-generation contra-angles.

Smart Miniaturization Enables Perfect Balance

NSK's Ti-Max nano preserves the high performance that NSK contra-angles are known for. These new handpieces are approximately 10 % smaller and lighter than conventional models and in combination with NLZ micromotor series, together they give you the ease of manoeuvrability and accuracy you are used to from your air-turbine.

Perfect Balance

Reducing size and weight shifts the centre of gravity to an optimal position, dramatically reducing fatigue during procedures and improving your fingertip dexterity.

Clean Head System

The Clean Head System has a labyrinth seal mechanism that reduces blood and foreign matter from entering the handpiece head from the oral cavity. As a result, the ball bearings and mechanical parts last longer.

Smaller and Slimmer

nano95LS has a smaller head and slimmer neck dimensions, which increases accessibility and visibility to posterior and difficult access areas.

Ti-Max nano line up

Exceptionally small head and slim body / Clear visibility and easy access / Amazingly quiet operation / Cellular Glass Optics / Titanium body with scratch resistant DURAGRIP / Clean Head System / Push Button Chuck (exclude nano65LS) / Outstanding Durability.

iCare C2/C3

Handpiece oiling and maintenance system

- Pre-set solution volume based on handpiece type.
- Thorough cleaning and lubrication with simple operation.
- Chuck cleaning and lubricating function.
- Purging mode removes excess oil.
- Integrated 1.2 litre oil tank reduces burden of refill.

Accurate and clean margins are the most important factor when achieving the best digital scan. Electric driven speed increasing handpieces are the best options when looking for the control you need to produce accurate margins.

What is a speed increasing handpiece?

A contra-angle that does everything a turbine (high speed) does and uses the same FG burs. But it has incredible 'torque' originating from the micromotor which puts it in a league of its own and puts you in total control – not more loss of power as you come into contact with the tooth. Choose your speed. Save time cutting preps.

What motor do I need to use speed increasing handpieces?

It must be an electric micromotor (not an air motor) as the gears inside (usually 1:5) need the electrical power to run at a high speed. These ultimate brushless electric micromotors can be retro fitted by an engineer or come as an option when buying new chairs. NSK's NLX micromotors offer a powerful 3.4Ncm of torque and the new NLZ micromotor offers increased torque up to 4.2 Ncm.

Buy Surgic Pro complete and get 50% off VarioSurg3

Surgic Pro

Implant and Oral Surgery

Multi-Functional Brushless Optic Surgical Micromotor for Oral Surgery and Implantology.

- LED Illumination
- Powerful torque (up to 80Ncm)
- Wide speed range (200 to 40,000 min⁻¹)
- High torque accuracy
- Lightest and smallest micromotor
- LED illumination (over 32,000 LUX)
- Ti Max X-SG20L implant handpiece
- Excellent durability
- Autoclavable, thermo-disinfectable and maintenance free brushless design
